*Reinverlebung - Gleichwohl Inpeller F 16 \**

Sample name	Age (years)
Infantile and Childhood	0-10
AD, AD/HD, bipolar	10-18
AD/HD, bipolar	18-30
AD/HD, bipolar, and other	30-50
AD/HD, bipolar, and other	50-70
AD/HD, bipolar, and other	70-90
AD/HD, bipolar, and other	90-100

### Background

Do health-care providers (HCPs) understand and value the importance of patient autonomy, and does it matter to them? The purpose of this study was to determine if HCPs' understanding and value of autonomy were related to their gender, age, and years of experience. The study was conducted in a teaching hospital in the United States. The study was conducted in a teaching hospital in the United States. The study was conducted in a teaching hospital in the United States.
